

### Expand the Scope of Your Spatial Design with Zero Offset Ultra-Short-Throw Zoom Lenses for LCD Projectors

#### ■ Main Features

### 01 | Ultra-Short-Throw Versatility with Zero Offset

Deliver a 200-inch (16:10) image from 1.43 m (4.69 ft) with zero offset for immersive performance in confined spaces. Viewers can approach the screen without casting a shadow while mirrorless design supports unobstructed front-projection visibility and screen-centered rear-projection installation.

### 02 | Flexibility Streamlines Installation Workflow

Optical zoom enhances projector location flexibility. Typically required installation precision is reduced with adjustment performed via powered zoom and V/H Lens-Shift\* after the projector is installed without needing to remove and relocate the unit, saving time and effort.

### 03 | Durability for Peace of Mind

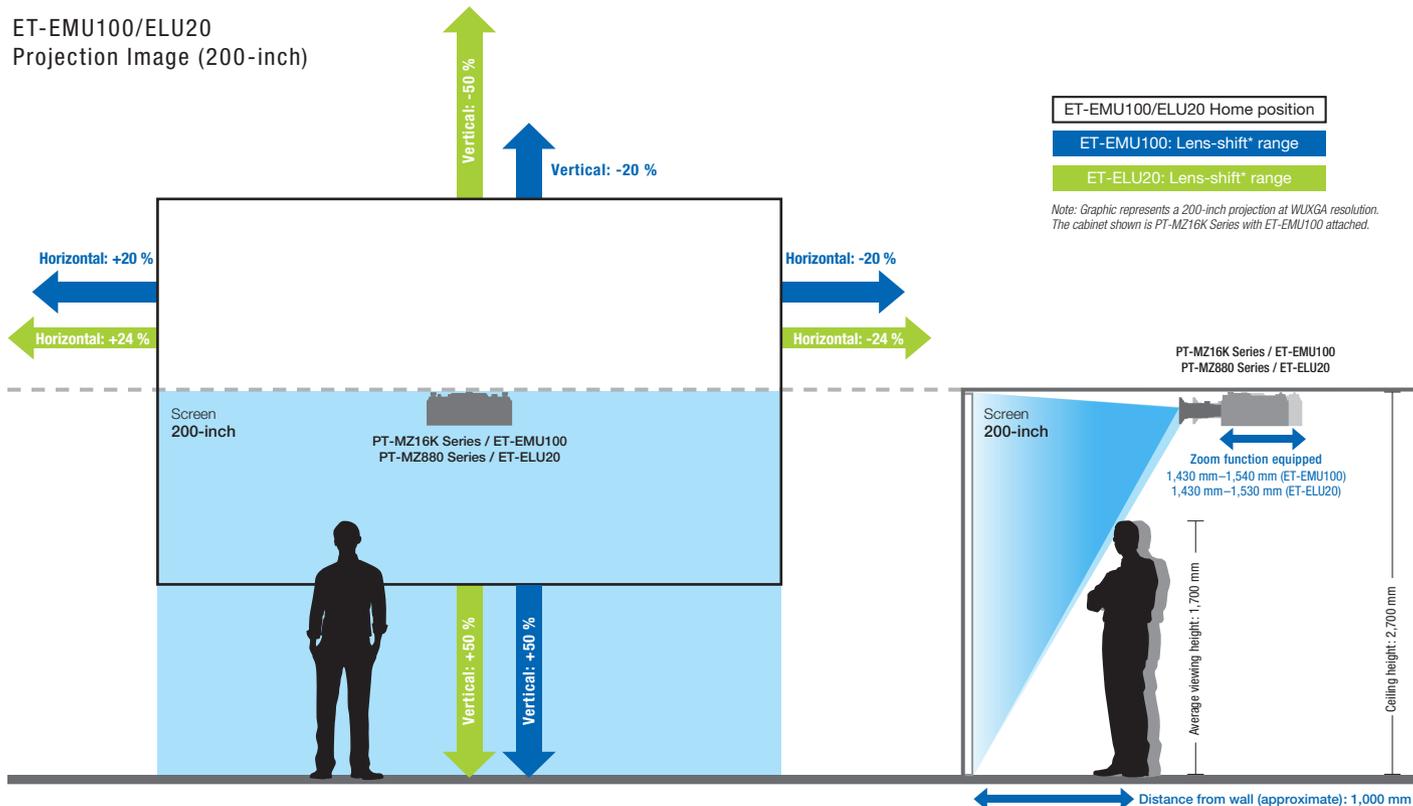

ET-ELU20's heat- and scratch-resistant glass lens reduces focus aberration from fluctuating lens temperature, keeping images sharp. ET-EMU100 supports AFO (Active Focus Optimizer) to maintain crisp focus regardless of content brightness.

Short Throw Reduces Screen Shadows

With short 0.330–0.353:1 (WUXGA) throw-ratio, both lenses support a minimum projection distance of about 1.43 m (4.69 ft) for a 200-inch (16:10) image. View the screen from close range without casting a shadow and breaking the spell woven by vivid LCD laser projection, even in hallways or other narrow spaces.

Save Time, Effort, and Cost of Installation

Powered zoom and V/H Lens Shift\* of V: +50 %, -20 %, H: ±20 % (ET-EMU100) and V: ±50 %, H: ±24 % (ET-ELU20) save time and effort by reducing typically required installation precision, enabling flexible image adjustment after the projector is installed with no need to remove and relocate the unit.

\* Lens-shift value is for ceiling installations at WUXGA resolution and will vary by model. For floor installations, up and right shift will be defined as a positive value. Down and left shift will be defined as a negative value.

Zero Screen-Offset Heightens Immersion

Zero offset eliminates the gap between image and ceiling for immersive floor-to-ceiling projection. Mirrorless design avoids lens overhang for a clear view of the screen without recessing the projector, while screen-centered location in rear-projection applications evenly distributes brightness from image center to corners.

Durability for Peace of Mind

ET-ELU20 employs heat- and scratch-resistant glass lens while ET-EMU100 supports automatic focus correction via AFO (Active Focus Optimizer). With these features, both lenses can maintain sharp focus even as lens temperature fluctuates with changes in projected content.
